To Whom It May Concern:

Sunlight Direct hired Steve Much in 2008 to assist with the mechanical design of our solar collector tracking mechanism. Over the past year, Steve has been an integral part of our design team – which included myself (CTO), Steve, and eight outside consultants. Steve's attention to detail, disciplined application of engineering procedures, and personal sense of responsibility for the emerging design were critical to our product's development success. I have worked closely with Steve during his employment with Sunlight Direct and saw firsthand his skills as an engineer. He has a practical understanding of "engineering for manufacturing", is a skilled user of Solidworks, and has a natural mechanical insight that leads to good working designs. He always performed his job in a professional manner and, I personally found, was very easy to work with. Steve is someone that you can count on to get the job done and he is eager to take on that responsibility. I would wholeheartedly recommend him for any job that requires a disciplined engineer for, among other things; prototype design, product development, and/or manufacturing engineering.

Please feel free to call me (865-599-5233) if you have any questions that I can answer regarding Steve and his involvement with Sunlight Direct.

Sincerely,

A handwritten signature in black ink that reads "Duncan Earl". The signature is written in a cursive, flowing style.

Dr. Duncan Earl
Founder & CTO
